

SHINEON TRIM

ShineOn Trim is a high gloss, abrasion and fade resistant, restoration and protective coating. It has been specifically formulated to provide an easy to apply and lasting coating to rejuvenate and enhance dulled and faded black plastic and vinyl trims. It is a viable and cost effective replacement for the common silicone based surface coatings that have short lived effectiveness and are easily washed off. Silicone coatings leave behind an oily residue that attracts dirt and grime and rubs off and soils objects that come in contact with the oily surface.

ShineOnTrim has a glossy appearance and provides an easy to clean surface with dirt and stain repellent features that will last for months. Due to its strong adhesion, tensile strength, and built-in ultraviolet protection, **ShineOnTrim** is ideal for use on hard plastic and composite materials and is ideally suited for restoration and protection of side view mirror housings, door handles, door trims, running boards and similar objects that easily fade from exposure to ultraviolet light rays. It is a water based product, free of odor, fumes and hazardous ingredients and completely safe to use in and around vehicles, boats, aircraft, homes, businesses, etc. **ShineOn** regular is a clear coating with all the features of **ShineOnTrim**.

ShineOnTrim can be applied by spraying or brushing. If more than one coat is necessary or desired, allow the first coat to dry prior to the second application. Prevent the coating from getting on hands and clothing as the dry film is difficult to remove. **ShineOnTrim** will dry in 10 to 15 minutes at ambient temperature of about 78°F and low humidity. The vehicle or other coated object may be put to use after this time, provided the coated surface itself is not exposed to harsh treatment.

Optimal film properties will be achieved in 48 hours. Tools and work area can be quickly and easily rinsed with water. Prior to application make sure that the object to be coated and sealed is dry and free of dirt, grease and other contaminants. If applying via spraying, make sure to protect surrounding areas from overspray. Wipe off excess and run-offs with a damp rag or sponge.

ShineOn Flex, also offered by **Liquiguard**, has been formulated to treat, protect and enhance soft and flexible surfaces such as tire sidewalls, weather strips and seals around doors, windows, etc. It prevents oxidation and drying out and extends the useful life of the seals.
