

LIQUIGRIP

A CLEAR CHOICE FOR SAFE SURFING

LIQUIGRIP is a crystal clear non-slip coating formulated to provide a secure grip over all types of materials and surfaces. It is suitable for use on surfboards, paddleboards and the various other boards, including skateboards, popular in the sports industry. Its application requires nothing more than simply spraying or brushing the target surface with **LIQUIGRIP**. It is a rapid dry coating and will allow the user to put the board in to action in less than 30 minutes after application, depending on the ambient temperature. **LIQUIGRIP** will develop full cure and lasting adhesion after overnight drying. **LIQUIGRIP** provides a much higher level of grip and will outlast any wax currently available on the market. Rejuvenating the grip feature, when necessary, is simply a matter of applying a fresh coat.

LIQUIGRIP is the strongest single component rubberized coating available that remains flexible throughout its operating temperature of -40°F to 150°F (-40°C to 60°C). It will retain its integrity even when submerged for extended periods. **LIQUIGRIP** bonds tenaciously with all types of materials including fiberglass, plastic, wood, metal, etc. including porous and non-porous surfaces. **LIQUIGRIP's** bond strength also permits its use as an outstanding adhesive. The crystal clear coating allows the colour and art of the coated surface to show through without compromise.

Secure Grip Coating For Use On All Materials And Surfaces

LIQUIGRIP has excellent ultra-violet resistance for marine and outdoor applications. It is not affected by saltwater and most everyday liquids and chemicals including alcohol, beer, oils, greases, fuel, acids and common solvents. It is also resistant to mold, mildew and bacteria. Besides spray cans, **LIQUIGRIP** is also available in eight ounce, quart, gallon and 5 gallon sizes.
