

OUTSTANDING WATER UV MOLD PROTECTION

KEY FEATURES

- Superior wood penetration enables long term protection. Use on all woods and wood veneers.
- Tenacious bond with the wood grain provides long term water and moisture protection.
- Built-in nano technology material enhances surface friction and provides anti-slip properties.
- Moisture control also protects against mold, mildew and algae growth.
- Prevents graying and oxidation of the wood surface.
- Pronounced and lasting water beading effect.
- Resists staining from spills and makes cleanup easier.
- Enhances the wood grain providing a rich natural patina.
- Re-application over time is easy with minimum surface preparation.

Coated with
TEAKPROTEK
Jan. 16th, 2019

TEAKPROTEK is a unique water based crystal clear, odor and fume free coating with outstanding adhesion and abrasion resistance. In addition to water, soil and stain protection, the teak wood is protected against harmful UV rays, preventing oxidizing and break down of the wood fiber.

Re-finish coat, when necessary, can be applied after a light sanding. No need to strip the previous **TEAKPROTEK** coat or other extensive prep work. Easy water clean up.

TEAKPROTEK has excellent storage stability when kept in tightly sealed containers. Store away from heat and high temperatures.
